

Feeding Our Furry Friends!

Use the chart below to answer the questions on Page 26 and 27.

Dog Weight	Cups*
5 lbs.	1/2
10 lbs.	1
20 lbs.	2
40 lbs.	4
60 lbs.	6
80 lbs.	8
100 lbs.	10

**This chart does not give accurate feeding proportions. Always feed your pet according to the directions found on the food package. If you have questions regarding the proper amount of food to feed your pet consult a veterinarian.*

1. Let's pretend we have a Chihuahua weighing 10 lbs. According to this chart, how much food should this dog be fed each day?

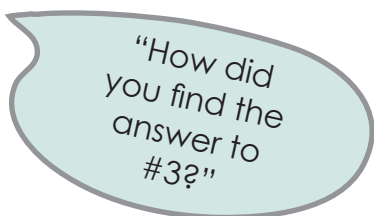

_____ of food each day.

2. A St. Bernard weighing 100 lbs. should eat how much food each day?

_____ of food each day.

3. How much food should a dog weighing 50 lbs. eat each day?

_____ of food each day.

4. If Tucker, a boxer, weighs 60 lbs., then he should eat _____ cups of food a day.

5. How much food will Tucker need for an entire week?

Show your work:

Tucker will need _____ for an entire week.

6. If each cup of food costs \$1.50, how much money will it cost to feed Tucker for an entire week?

Show your work:

Tucker's food will cost _____ for an entire week.
